ACKNOWLEDGEMENT

An endeavor over long period can be successful only with advice and guidance of many well-wishers. We thanks to HOD **Mr. R. A. Hatgine ,** of Third year for this opportunity. We would like to thank the Computer Science and Engineering department for assistance and constant source of encouragement.

We wish to express our profound and deep sense of gratitude to **Mrs . S. N. Kumbhar** for sparing their valuable time to extend help in every step of our project.

Thanking you.

Sanjyot Sanjay Dasare

ABSTRACT

The project aims to develop a lightweight image editor using PHP. Online image Editing is an intense process that involves various operations. Users will be able to upload images, perform basic manipulations (such as resizing, cropping, and rotating), and save the edited images. Image resizing by changing style elements (Height and width) of an image, Image cropping by use of non-rectangular mat or picture frame for selection of portions, Image flipping by flipping an image at horizontal or vertical axis. The implementation will utilize PHP's GD library for image processing and provide a user-friendly interface for interaction.
